

# Racord® Plus

## Twisted Gingival Retraction Cord with Epinephrine plus Astringent

Racord Plus is twisted cotton cord saturated with a solution of racemic epinephrine hydrochloride and astringent (zinc phenolsulfonate) and dried by a technique which retains the activity of the medication. Normal tissue moisture reactivates the medication, which promptly retracts gingival tissue in a manner that causes no tissue damage, yet fully exposes the gingival margin. The combination of epinephrine and astringent provides the cord with enhanced physical and chemical retraction.

Racord Plus is designed for dentists who insist on the best retraction medium available (epinephrine impregnated Racord), yet who are concerned with the cardiovascular effects of epinephrine which occur in some patients. By adding an astringent to the cord, the epinephrine content can be dropped by as much as 70% without sacrificing the effectiveness of full-strength epinephrine.

**Contents:** Each bottle contains 72 inches twisted cotton cord. The average concentration of medicament is:

		Zinc
--	--	------

Epinephrine	Phenolsulfonate	
-------------	-----------------	--

Racord Plus	0.17 mg/in	0.30 mg/in
-------------	------------	------------

00		
----	--	--

Racord Plus	0.225 mg/in	0.40 mg/in
-------------	-------------	------------

0		
---	--	--

Racord Plus	0.30 mg/in	0.70 mg/in
-------------	------------	------------

1		
---	--	--

Racord Plus	0.35 mg/in	1.45 mg/in
-------------	------------	------------

2		
---	--	--

**Indications for Use:** Use whenever gingival retraction is advisable in dental practice, as preceding impression taking with any elastic impression material; or prior to placement of caps, crowns, bridges; and during tooth preparation.

**Contraindications:** Racord Plus is contraindicated for persons who are epinephrine sensitive, or for persons suffering from cardiovascular disease, diabetes, or hyperthyroidism. Caution should also be taken for elderly, pregnant, and pediatric patients. For such persons Pascord® is the retraction cord of choice. It is packaged in four sizes, like Racord Plus, but contains no epinephrine. Racord Plus contains only one third the epinephrine found in Racord and most other leading epinephrine-type retraction cords. Therefore the possibility of adverse epinephrine reactions is reduced accordingly. However, with the presence of epinephrine, the patient's medical history should be consulted and the usual precautions observed.

**Warnings:** Contains Sodium Bisulfite, a sulfite that may cause allergic-type reactions, including anaphylactic symptoms, and life-threatening or less severe asthmatic episodes, in certain susceptible persons. The overall prevalence of sulfite sensitivity in the general population is unknown, but probably low. Sulfite sensitivity is seen more in asthmatic than non-asthmatic persons.
